1. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

2. The abstract of the disclosure is objected to because legal phraseology such as “comprising” is used. Correction is required. See MPEP § 608.01(b).

3. Claim 1 is objected to because of the following informalities:

In claim 1, "said connector" on line 4 has no antecedent basis. Should “connector” be “body”.

Appropriate correction is required.

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Kuan (Pat # 6,083,059).

As to claim 1, Kuan discloses in figure 2 a terminal structure having a body (31), a spring contact arm (25) and a soldering portion (23) and hollow holes (22) are on the body and a plurality of conducting paths formed by the hollow holes.

As to claim 2, Kuan also shows a hanging arm (24) in “S” shape with elasticity is stretched between the body (21) and the spring contact arm (25).

As to claim 3, the soldering portion is stretched downward from the other end of the body (21) not the end with the hanging arm for electrical connecting to Printed circuit board.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Huang (Pat # 6,293,834) disclose electrical contact having spring arms with displaces orthogonal to each other.

Hsiung et al (Pat # 6,086,401) disclose terminal having low insertion force.

Lapes (Pat # 4,043,631) discloses electrical terminal structure for connector.
